Education

Nehru Institute of Engineering and Technology **May 2025**

B.Tech in Computer Science and Business Systems (CGPA: **8.6/10**) *Coimbatore, TN*

Technical Skills

Languages: Java, JavaScript, TypeScript, C, Python

Frameworks: Spring Boot, React.js, Redux, Next.js, Node.js, RESTful APIs, WebSockets, i18n

Cloud & DevOps: AWS (CloudWatch RUM, S3, CodePipeline), CI/CD, Docker, ELK

AI & Automation: MCP (Model Context Protocol), RAG Pipelines, LLM Integration, AI Agents, AIDLC

Tools & Databases: Git, Postman, Kafka, Firebase, MinIO, ServiceNow, PostgreSQL, Redis

Core: Data Structures & Algorithms, OOP, System Design, Agile

Work Experience

Software Development Engineer I **Mar 2026 – Present**

Amazon (Payroll of BCT Consulting) *Hyderabad, India*

- Improved the booking funnel through a seat layout redesign, new error-recovery flows and **25** bug fixes, lifting seat-to-boarding-point conversion by **0.63 pts**, review-to-payment from **73.6% to 78.4%**, and listing-to-booking from **16.7% to 19.9%**.
- Expanded search coverage to **101** alias cities (landing-to-listing **77.5% to 80.9%**) and onboarded new operators, adding about **3,000** monthly bookings.
- Built **AWS CloudWatch RUM** dashboards and metrics to monitor funnel conversion, optimized CodePipeline/S3 CI/CD (**cutting deploy time by 15%**), and hardened Java/Spring Boot services with replica DB reads, timeouts, idempotent retries and ELK logging (**cutting read latency by 18%** and integration failures by **25%**).
- Built a React/Redux frontend with a reusable i18n framework, **cutting string duplication by 20%**, and deployed MCP servers and RAG pipelines for AI-first workflows, **speeding ticket turnaround by 20%**.

ServiceNow Analyst **Oct 2025 – Jan 2026**

Cubesimple *Chennai, India*

- Streamlined ServiceNow Incident, Problem and Change Management, validated REST APIs with Postman and monitored Kafka streams to resolve issues faster, **cutting P1 resolution time by 15%**.

Full Stack Developer Intern **Apr 2025 – Oct 2025**

Procyon Technostructure *Chennai, India*

- Built secure, scalable REST APIs with Java/Spring Boot for the platform backend, migrated authentication to **Firebase**, optimized **PostgreSQL** schemas (**cutting query latency by 20%**), and shipped a **WebSocket** chunked-upload pipeline to MinIO for an AI proctoring module.

Projects

Smart Transbot System | ***Arduino Uno, Python, YOLO, Voice Control***

- Automated slow, manual factory material handling by engineering an autonomous Arduino Uno bot, **cutting manual labor by 60%**.
- Implemented **YOLO-based object detection** in Python so the bot can recognize objects in its environment and respond autonomously.
- Added **voice-command control** for hands-free operation, making the bot easy to direct on the factory floor.

Achievements

- Demonstrated **Bias for Action** during a critical launch window: owned and delivered the entire project end to end in a short period and **deployed it ahead of the launch timeline**, earning formal recognition from leadership.
- Piloted **AIDLC** (AI-Driven Development Lifecycle) on a P0 deliverable, **compressing the delivery timeline by 42%**, and was recognized as **Best Performer** by team leadership for the contribution.
